

Tuhaye Price List

After our initial assessment of Tuhaye properties we at Ground Solutions have developed a plan to eradicate the noxious weeds for the homeowners. The main weeds on all properties are thistle, mullen and various knapweeds. This does not mean we won't target every other weed on your property.

For best results, three applications are recommended per growing season. The initial application will be in early spring when the first noxious weeds emerge (mid-April to mid-May). During the summer months, we see a second surge and target the spring weeds before they go to seed (mid-June to mid-July). Lastly, a fall application is recommended to get the third and final push to kill off any remaining weeds (mid-August to mid-September).

Spraying on a triannual schedule it takes 5-7 years to eradicate noxious weeds. Our goal at Ground Solutions is to develop the best program for you and your land needs, where we will use the most efficient and effective methods possible.

While spraying in areas of concern; waterways, outdoor gathering areas and wildlife/livestock thoroughfares, our method is spot spraying, only targeting the plant itself. In doing this the plant absorbs the chemical and doesn't allow for external contamination.

This aggressive method of weed abatement is scoped and priced to spray the targeted noxious weeds for one application.

Triannual Schedule of Fees:

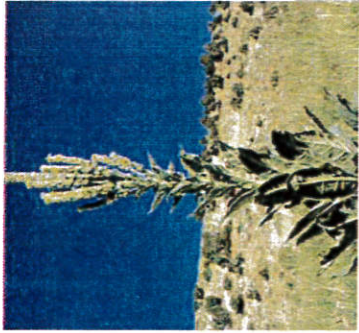

Spring:	\$ 110 per acre
Summer:	\$ 110 per acre
Fall:	\$ 110 per acre

For example, if your lot is 1.43 acres our price would be \$157 to eradicate the noxious weeds. Our minimum charge is \$110 for lots that are under 1 acre.
